To be completed by Dralon GmbH only!

Licence sheet no. _____

in respect of licence agreement no. _____

Under figure III, paragraph 1 of the above Licence Agreement, we hereby grant you permission to label the above mentioned article with the dralon® logo. Instead of the word dralon® the logo

a step ahead in acrylic fibers

(hereinafter referred to as "the logo") can be used on labels, packaging and other means of identification. The name "dralon®" and the symbol are registered trademarks whose purpose is exclusively to identify the origin of the fibre material.

In case of articles not made exclusively of dralon® where this trademark may only be used as described above with a qualifying clause or for specific parts, this also applies to the logo.

In addition, the conditions stipulated in the Licence Agreement for the use of the dralon® trademark, with exception of figure V, para 3 also apply to use of the logo. However, the use of the logo in advertisements, other advertising matter and commercial publications is only permitted once our approval has been obtained for the proposed layout.

Minimum fastness conditions for dralon®

A very high level of fastness must be achieved with fabrics produced from 100% dralon® or in blends with other fibres. The fastness should not fall below the values given in the following table. Should a lower value occur then the use of the trademark cannot be permitted.

The Dralon GmbH reserves the right to conduct spot-checks if necessary to assure themselves that the minimum fastness standards are maintained.

	dralon® Outerwear	dralon® Home textiles
Light fastness (DIN 54 003 and 54 004) (prints)	5 (4)*	6 6
Wash fastness (DIN 54 014) Colour change Bleeding	4 – 5 4	4 – 5 4
Perspiration fastness (DIN 54 020) alkaline + acid Colour change Bleeding	4 – 5 4 – 5	4 – 5 4 – 5
Dry and wet rubbing fastness (DIN 54 021)	4 – 5	4 – 5
Fastness to dry cleaning in perchlorethylene (DIN 54 024) Colour change Bleeding	4 – 5 4 – 5	4 – 5 4 – 5
Fastness in hot pressing (light) (DIN 54 054)	4 – 5	

*(When necessary, concessions regarding the light fastness can be made in the case of very pale pastel shades.)

All dyestuffs used for fibre blends must ensure the same high fastness properties as those used to dye dralon®. The flammability performance of upholstery fabrics and the finish which determines burning behaviour do not form part of our trademark agreement test. They are the responsibility of the manufacturer of the finished goods.

If and insofar as there are legal regulations in the country of sale which require that goods of this type meet specific test standards, the use of trademark dralon® is only permitted if you have a certificate from an official test institute stating that the goods satisfy these requirements.
