Fiber fineness:

Single or number of threads in doubled yarns:

Composition of effect yarns or filaments:

Type of machine and gauge:

Dyeing and finishing:

Construction:

Date

Stamp/Signature

In case of positive test results a signed licence agreement (in duplicate on dispatch by mail/courier service) will be send to the applicant. Only after both parties have received a copy of the agreement countersigned by the other party and at least one licensed construction is involved, we grant you permission to label the above mentioned article with the dralon® logo. Authorisation in respect of the dralon® trademark shall be granted solely on special licence sheets (accompanying the licence agreement or sent separately in the case of an existing licence agreement) specifying in each case the construction licensed and the wording by which it shall be distinguished. Instead of the word dralon® the logo

(hereinafter referred to as "the logo") can be used on labels, packaging and other means of identification. The name "dralon®" and the symbol are registered trademarks whose purpose is exclusively to identify the origin of the fiber material. In addition, the conditions stipulated in the mutually signed licence agreement for the use of the dralon® trademark, also apply to the use of the logo. However, the use of the logo in advertisements, other advertising matter and commercial publications is only permitted once our approval has been obtained for the proposed layout.

Dralon GmbH, Dormagen
as of: June 2019

To be completed by Dralon GmbH only!

Minimum fastness conditions for dralon®

A very high level of fastness must be achieved with fabrics produced from 100 % dralon® or in blends with other fibers. The fastness should not fall below the values given in the following table. Should a lower value occur the use of the trademark cannot be permitted. The Dralon GmbH reserves the right to conduct spot-checks if necessary to make sure that the minimum fastness standards are maintained.

	dralon® Outerwear	dralon® Home textiles
Light fastness (DIN 54 003 and 54 004) (prints)	5 (4)*	6 6

* (When necessary, concessions regarding the light fastness can be made in the case of very pale pastel shades.)

Wash fastness (DIN 54 014) Colour change Bleeding	4 – 5 4	4 – 5 4
Perspiration fastness (DIN 54 020) alkaline + acid Colour change Bleeding	4 – 5 4 – 5	4 – 5 4 – 5
Dry and wet rubbing fastness (DIN 54 021)	4 – 5	4 – 5
Fastness to dry cleaning in perchlorethylene (DIN 54 024) Colour change Bleeding	4 – 5 4 – 5	4 – 5 4 – 5
Fastness in hot pressing (light) (DIN 54 054)	4 – 5	

All dyestuffs used for fiber blends must ensure the same high fastness properties as those used to dye dralon®. The flammability performance of upholstery fabrics and the finish which determines burning behaviour do not form part of our trademark agreement test. They are the responsibility of the manufacturer of the finished goods. If and insofar as there are legal regulations in the country of sale which require that goods of this type meet specific test standards, the use of trademark dralon® is only permitted if you have a certificate from an official test institute stating that the goods satisfy these requirements.
