

dralon® acrylic fiber. Sustainable and responsible in the future.

a step ahead in acrylic fibers

Are you dralonized? Do you already know the environmental advantages of dralon® acrylic fiber? Lower water consumption and CO₂ emission values, which lie below the international industry average, speak for themselves. We confirm these values to be "sustainable". Based on figures from 2011, there is a further reduction of 5%. That proves our current CO₂-Footprint. Get dralonized now!
